

UNBELIEVABLE

CARPET SPOT AND STAIN REMOVER

"Spots and stains never come back"

Here's the simple to use neutral pH spotter that every contract cleaner, hospital, carpet cleaner and householder should have at the ready - for every type of carpet.

UNBELIEVABLE, at the name suggests gives you an incredible wide range of stain removing power at the pull of a trigger. Normally high alkaline cleaners are necessary to obtain the same results as UNBELIEVABLE. Stains usually return when other spotters are used. Not UNBELIEVABLE.

WoolSafe approved

The WoolSafe organisation runs an international testing and approvals programme for cleaning products used on wool carpets. Up to 16 tests are completed to ensure that approved products are colour safe and cannot harm wool fibres. We proudly display the WoolSafe logo on the UNBELIEVABLE product label. If its safe on wool its safe on any fibre.

Works on Greasy/Oily Stains

Using gentle fluoro carbon ingredients, plus solvents, UNBELIEVABLE gently solubilises oily spots as well as hard to shift lipstick, printer toner, even some inks are removed. A protective stain blocker prevents these from returning.

Protein stains like gravy, eggs, blood.

After sponging with cold water, fresh blood, gravy and other food products like Vegemite and mayonnaise are pulled out. UNBELIEVABLE is especially useful for medicines found in the Hospitals and Nursing Home environments.

Acidic stains - some tannin, coffee, tea.

These are the hardest stains for a general spotter to remove. However, UNBELIEVABLE takes on this challenge by the addition of specially absorbent fluoro polymers which break the bond that tannin has to the fibre. Whilst not able to remove every stain in this category, it removes a high proportion. (The RESEARCH PRODUCTS spotting kit is the best acquisition for the professional cleaner and contains 4 specialty pre-extraction spotters).

Directions

Lightly spray the affected area using the trigger spray pack or, without dilution, into your own spray gun. Agitate with nothing more aggressive than your own fingers, wait one minute, then sponge toward the centre of the stain with a damp, clean white towel. Rinse the towel and rinse out the stain and spotter residues. It really does not matter if the residues aren't completely removed by rinsing as they won't come back anyway.
